

Move-D Brace

The Move-D device is a lightweight, easy-to-wear, portable and comfortable orthosis designed to minimize tremors in the dominant upper extremity for patients with movement disorders and conditions. The ultimate goal of the Move-D is to enable functional independence in children.

- Improves the performance of Activities of Daily Living (ADLs)
- Ability to grow with the patient
- Adjustable upper and lower arm cuffs for length with upper and lower arm straps
- Smooth surface makes strap and padding easy to clean
- Designed with a strap stop for easy strapping and unstrapping
- One size with left and right specific options
